

Enhancing Fall Dry Fertilizer Programs:

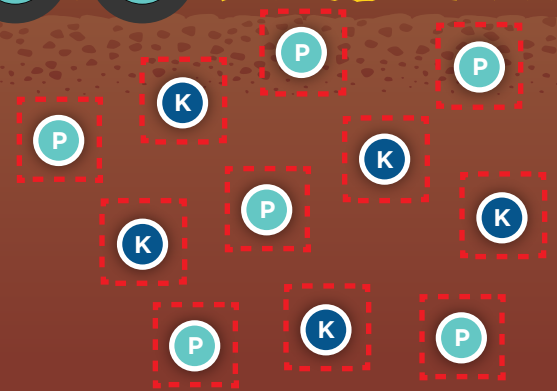

WHAT'S BIOCATALYST TECHNOLOGY GOT TO DO WITH IT?

Many growers apply phosphorus (P) and potassium (K) fertilizers in the fall to help feed the next year's crop.

PROBLEM:

Unfortunately, many of these growers are not going to get the first-year P and K efficiency and recovery they need, since these nutrients are often tied up by soil chemistry.

How can growers increase the availability of applied P and K to meet crop demands?

SOLUTION:

Biocatalyst Technology Can Help!

Titan[®] XC, a fertilizer biocatalyst, can be incorporated into a grower's existing dry fertilizer program

to **INCREASE P** and **K AVAILABILITY** and

IMPROVE plant uptake

THE RESULTS?

Better nutrient use efficiency and increased yield opportunities
