

MAXIMIZING RESIDUE BREAKDOWN AND NUTRIENT RELEASE AFTER A LATE HARVEST

Biochemical Technology Can Help!

**WITH THIS SEASON'S
LATE HARVEST**

AND WINTER TEMPERATURES

**THERE'S ONLY A SHORT WINDOW
FOR MANAGING RESIDUE**

PROBLEM:

Cooler temperatures slow residue breakdown, leaving valuable nutrients locked up in the stover.

SOLUTION: Accomplish LM, a biochemical fertilizer catalyst, helps speed residue breakdown and nutrient release – even when it's cold out.

**When nature slows,
Accomplish LM
keeps working!**

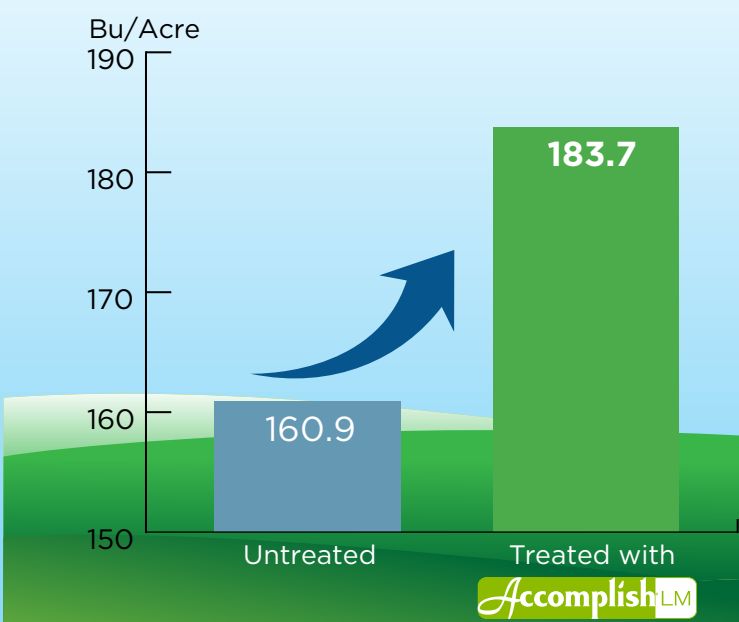

THE RESULTS?

**Increased efficiency of soil N, P & K
and higher yields at the next harvest**

Last year's residue...this year's nutrients

Improved Corn Yields Following Fall Residue Application of Accomplish LM

Corn - Whitehall, IL (2013)

Accomplish LM applied at 2 qts per acre in Fall 2012 on soybean stubble

22.8 bushel per acre increase
