

FINALLY, A Soybean StartUp PROGRAM

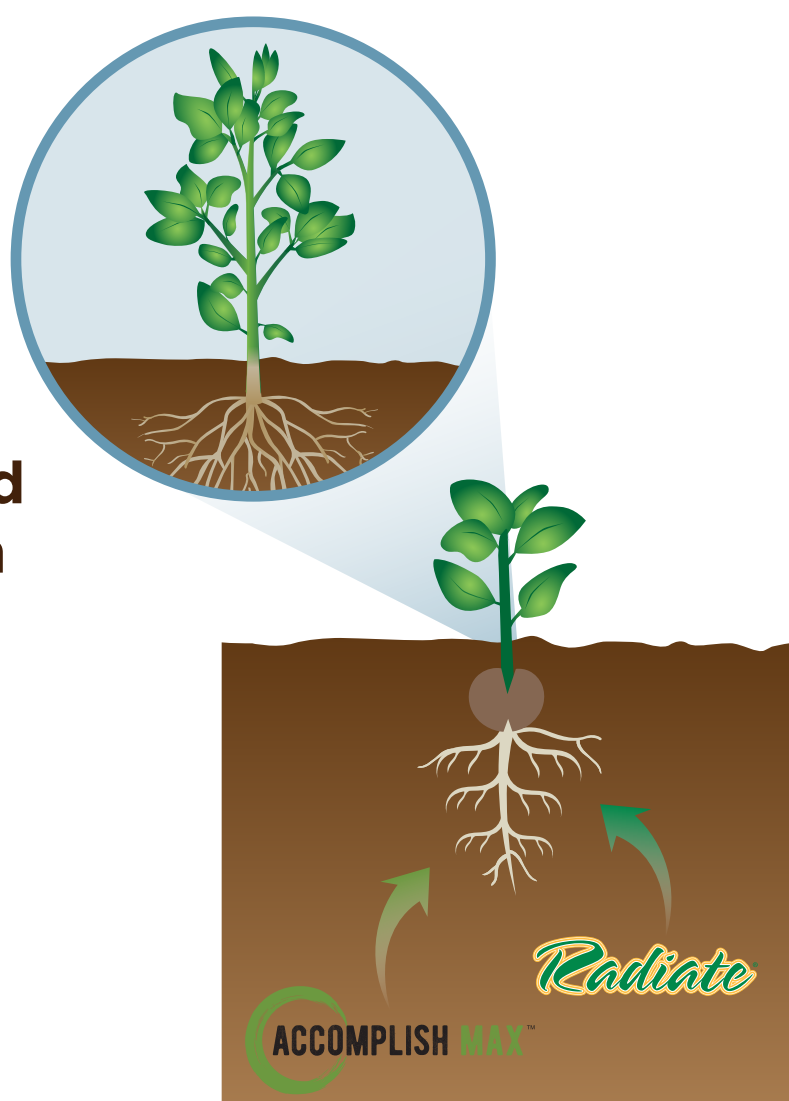

Problem

Soybean growers need new tools to help them improve plant health and yield. A starter program can play a role, but traditional starter fertilizers contain salts that can damage soybean seedlings.

Solution

Working together, Accomplish® MAX and Radiate® get soybean crops off to a faster, better start. An early application of these salt-free products helps to cost effectively increase plant vigor, reduce plant stress and enhance productivity.

Benefits:

- Better root growth and plant vigor
- Less early season stress
- No salt, so safer for the seedling
- Low-volume efficiency
- Better plant health from emergence through yield
